

Whole website

I used Bootstrap framework for the whole site and included the fullPage.js plugin for full-page sections.

Section 1

I used Html5 Canvas to draw the image with the logo and the background photo I got from <https://stocksnap.io/> and the logo I made in Illustrator.

Section 2

I created a data visualization easyPieChart using the js code. It shows a brief skill look into the baker's life, using the pie chart to show time that is invested into baking.

Section 3

Here is where I used Html5 Canvas to render the text "Real men bake". I included the image gallery from my fullPage.js plugin that I used in my Presentation. Gallery photos were a mix of <https://stocksnap.io/> and <http://foodiesfeed.com/>.

Section 4

I created a contact me part and I used the jQuery effects of the Slide Toggle to toggle the information on and off the viewport.

Section 5

Here is where I used Html5 video and set it to loop upon entering the page from <http://www.lifeofvids.com/>. The video was already an MP4 I went and converted it to OGG through <http://www.online-convert.com/>.

Section 6

This is where I added a button toggle to show a little bit of the site's character with a quote that shows and hides upon button clicking.

Here are the links to the multi-media to show proof that anything used is 100% royalty free.
